UGANDA CERTIFICATE OF EDUCATION

S2 BIOLOGY END OF TERM II EXAMINATIONS

Paper 1 Theory

Time: 1 hour 30 minutes

Instructions;

- Attempt all items in section A and in section B
- Responses to items in section A must be written in the spaces provided while those of section in B must be written on the answer sheets provided

SECTION A (ATTEMPT ALL ITEMS IN THIS SECTION)

ITEM ONE

A village in western Uganda has recently experienced an unusual pattern of illness. Several people developed sudden fever, tiredness, joint pain, and vomiting. After a few days, some started to bleed from the nose and gums.

Most of the first cases had attended a traditional burial where the deceased person had died of a “strange fever.” Villagers shared meals, hugged the body, and washed it without gloves. Later, a nurse at the local clinic also fell sick after treating two patients without full protective gears

Task

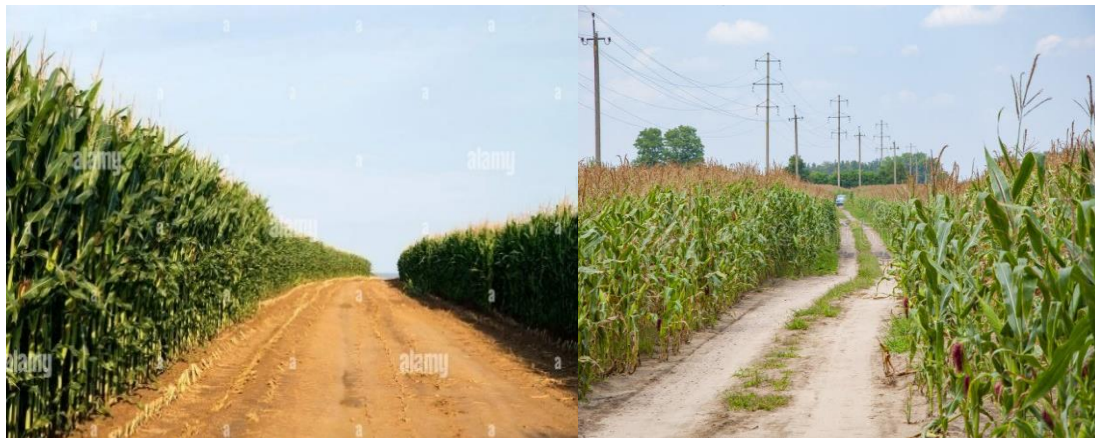

- (a) What could be disturbing the village according to your analysis?

- (b) Explain the ways how the above identified problem is transmitted in the village?

(c) What advice can you offer to the villagers to stop all the misery?

ITEM TWO

Jonah planted maize and mixed beans on his plot along a dusty road side. As a way of obtaining good yields, prepared his garden well and planted quality seeds in closely packed columns and rows, applied fertilizers, sprayed to prevent any pests and removed weeds. He planted maize earlier and planted beans later after the maize were already tall. His maize yielded poorly and beans remained stunted with no yields. He is very worried about the outcome yet he spent a lot of money on the garden.

TASK.

a. Describe the causes of the outcomes.

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and extend across the width of the page. There are no margins, text, or other markings on the paper.

b. Advice Jonah on how he can plant the same plants in the same garden in other seasons with minimal losses.

[illegible]

ITEM THREE

Alex and Anna after being married for 6 years, they failed to produce children, Alex blamed his wife for failing to produce for him children. As a result Alex decided to search for another women who would produce for him children, however, he did not produce any child and when he visited the hospital was told that he had few reproductive cells and it was also discovered that he had contracted HIV AIDs in the process.

Task.

- a) What is the special name of Alex's cells that were said to be in low amount

- b) How can Alex live safely with his other HIV/AIDS **medical condition** mentioned in the scenario

- c) Which advise can you give to the age mates of Alex to avoid the problems that clever is undergoing through.

SECTION B (ANSWER ONE ITEM IN THIS SECTION)

ITEM FOUR

The residents of Kigezi cultivate their crops on hillsides. A recent heavy rainfall resulted in erosion, washing away parts of the hillslopes and causing damage to crops, forest reserves and wildlife. Stagnant water pools formed in the valleys, leading to malarial issues. The community rears large herds of cattle that they over graze on their land. Others are free and destroy peoples crops. Some residents carry out deforestation and bush burning and it has reduced soil fertility in some regions. The District environmental officer holds the residents responsible for the damage and seek to understand their role in order to address the issue without leaving their ancestral land.

TASK.

- a. Identify the human activities reducing soil fertility in the scenario.
- b. Explain how the above identified human activities affect soil fertility
- c. Advise the residents on how they can conserve the environment, improve soil fertility and use the available natural resources effectively.
